Codebook

Chapter 4: The Political Geography of Welfare and Sectarianism

ZONE-BASED DATASET

kadaa_old

Name of the kada'a (district) in which the zone is located.

kadaa_co

Code of the kada'a (district) in which the zone is located.

zone_no

ID number of the zone.

zone_nam

Name of the zone.

id2

ID number of the zone in which the institution is located. This variable can be used to merge the institution-based dataset with the zone-based dataset.

d_future

Dichotomous variable, indicating the presence of welfare agencies linked to the Sunni Future Movement at the zone level. For the data sources of this variable, see pp. 95-96 of *Compassionate Communalism*.

d_hezbollah

Dichotomous variable, indicating the presence of welfare agencies linked to the Shi'i Hezbollah at the zone level. For the data sources of this variable, see pp. 95-96 of *Compassionate Communalism*.

d_amal

Dichotomous variable, indicating the presence of welfare agencies linked to the Shi'i Amal Movement at the zone level. For the data sources of this variable, see pp. 95-96 of *Compassionate Communalism*.

d_kataeb

Dichotomous variable, indicating the presence of welfare agencies linked to the Shi'i Kataeb at the zone level. For the data sources of this variable, see pp. 95-96 of *Compassionate Communalism*.

frac

Measures the degree of ethnoreligious fractionalization of the population at the zone level based on voter registration records. Fractionalization is defined as the Herfindahl index of heterogeneity among groups representing the politically relevant cleavages in the country (Shi'i, Sunni, Christian, Druze, and Armenian). The variable is coded on a scale of 0 (no fractionalization, or perfect homogeneity) to 1 (extreme heterogeneity). At the zone level, the level of ethnoreligious fractionalization ranges from 0 to 0.66.

The fractionalization index was created using sectarian composition based on voter registration data. The formula for fractionalization in geographical zone i is

$$Fractionalization = 1 - \sum_{k=1}^N (S_{ki})^2$$

where k represents sectarian groups and S_{ki} is the proportion of the k th sectarian group in geographical zone i .

p_armenian

Percentage of the Armenian community at the zone level. Data source: voter registration records.

p_christian

Percentage of the Christian community at the zone level. Data source: voter registration records.

p_druze

Percentage of the Druze community at the zone level. Data source: voter registration records.

p_shia

Percentage of the Shi'a community at the zone level. Data source: voter registration records.

p_sunni

Percentage of the Sunni community at the zone level. Data source: voter registration records.

ppop_estmt

Measures the percentage of the national population residing in a given zone. The value of *pop_estmt*, a continuous variable, ranges from an infinitesimal value (0.0000055 percent) to almost 5 percent. The original data came from surveys executed by the Lebanese government Central Administration of Statistics (CAS) in 1997, were digitized by the Centre d'Etudes et de Recherche sur le Moyen Orient Contemporain (CERMOC) in 1998, and were updated periodically until 2002, when the Directorate of Geographical Affairs within the Lebanese army published the data. The data are provided by the Lebanese Council for Development and Reconstruction (CDR) and catalogued in the data repository of the U.S. Agency for International Development (USAID) Geographic Information Support Team (GIST).

landuse_max

An ordinal measure designed to capture a range of land-development types: uninhabited and uncultivated areas (0), purely agricultural areas (1), rural areas with some residential communities (2), less developed

towns and urban areas (3) and most developed towns and urban areas (4). Published in 2006, the land-use data were collected in 1998 using satellite images that were digitized by the National Center for Remote Sensing of the Lebanese Ministry of Environment. The data are provided by the Lebanese Council for Development and Reconstruction (CDR) and are accessible from the U.S. Agency for International Development (USAID) Geographic Information Support Team (GIST).

landline_cvg_avg

Telephone landline coverage measured at the zone level across the national territory. The variable is an ordinal measure coded as unpopulated areas (0), areas not covered (1), areas covered by wireless local loops (2), and covered areas (3). Based on information collected in 2001, the data are from the Lebanese Council for Development and Reconstruction (CDR) and are accessible from the U.S. Agency for International Development (USAID) Geographic Information Support Team (GIST).

high_ses

Derived from the 2007–2008 household surveys conducted by Statistics Lebanon. The data group households into four socioeconomic categories: low-income (A), lower-middle income (B), upper-middle income (C), and upper income (D). The categories are based on the self-reported, combined household income and ownership of a range of appliances and amenities such as mobile phones, cars, and refrigerators. This variable shows the percentage of households in the upper income group in a given zone. Data are limited to Beirut and Mount Lebanon provinces.

upper_middle_ses

Derived from the 2007–2008 household surveys conducted by Statistics Lebanon. The data group households into four socioeconomic categories: low-income (A), lower-middle income (B), upper-middle income (C), and upper income (D). The categories are based on the self-reported, combined household income and ownership of a range of appliances and amenities such as mobile phones, cars, and refrigerators. This variable shows the percentage of households in the upper-middle income group in a given zone. Data are limited to Beirut and Mount Lebanon provinces.

lower_middle_ses

Derived from the 2007–2008 household surveys conducted by Statistics Lebanon. The data group households into four socioeconomic categories: low-income (A), lower-middle income (B), upper-middle income (C), and upper income (D). The categories are based on the self-reported, combined household income and ownership of a range of appliances and amenities such as mobile phones, cars, and refrigerators. This variable shows the percentage of households in the lower-middle income group in a given zone. Data are limited to Beirut and Mount Lebanon provinces.

low_ses

Derived from the 2007–2008 household surveys conducted by Statistics Lebanon. The data group households into four socioeconomic categories: low-income (A), lower-middle income (B), upper-middle income (C), and upper income (D). The categories are based on the self-reported, combined household income and ownership of a range of appliances and amenities such as mobile phones, cars, and

refrigerators. This variable shows the percentage of households in the lower income group in a given zone. Data are limited to Beirut and Mount Lebanon provinces.

INSTITUTION-BASED DATASET

id2

ID number of the zone in which the institution is located. This variable can be used to merge the institution-based dataset with the zone-based dataset. zone_no and zone_name variables have been omitted from this dataset to protect anonymity of the institutions.

kadaa_code

Code of the kadaa in which the institution is located.

kadaa_name

Name of the kadaa in which the institution is located.

clinic

Indicator variable indicating the type of the institution. 1=clinic, 0=not a clinic.

hospital

Indicator variable indicating the type of the institution. 1=hospital, 0=not a hospital.

privschls

Indicator variable indicating the type of the institution. 1=private school, 0=not a private school.

privsubschls

Indicator variable indicating the type of the institution. 1=private subsidized school, 0=not a private subsidized school.

pubsch

Indicator variable indicating the type of the institution. 1=public school, 0=not a public school.

nsp

Indicator variable indicating the affiliation of the institution. 1=institution affiliated with a non-state provider, 0=not an institution affiliated with a non-state provider.

amal

Indicator variable indicating the affiliation of the institution. 1=institution affiliated with the Amal Movement, 0=not an institution affiliated with the Amal Movement.

amel

Indicator variable indicating the affiliation of the institution. 1=institution affiliated with the Amel Association, 0=not an institution affiliated with the Amel Association.

ahbash

Indicator variable indicating the affiliation of the institution. 1=institution affiliated with the Al-Ahbash Organization, 0=not an institution affiliated with the Al-Ahbash Organization.

future

Indicator variable indicating the affiliation of the institution. 1=institution affiliated with the Future Movement, 0=not an institution affiliated with the Future Movement.

hezbollah

Indicator variable indicating the affiliation of the institution. 1=institution affiliated with the Hezbollah, 0=not an institution affiliated with the Hezbollah.

kataeb

Indicator variable indicating the affiliation of the institution. 1=institution affiliated with the Kataeb, 0=not an institution affiliated with the Kataeb.

makhzoumeh

Indicator variable indicating the affiliation of the institution. 1=institution affiliated with the Makhzoumeh Foundation, 0=not an institution affiliated with the Makhzoumeh Foundation.

nej

Indicator variable indicating the affiliation of the institution. 1=institution affiliated with the al-Nejdeh al-Sha'abiyyeh, 0=not an institution affiliated with the al-Nejdeh al-Sha'abiyyeh.

category

Nominal variable indicating the category of the affiliation of the institution. 1=Christian party, 2=Shi'a party, 3=Sunni party, 4=Druze (party or charity), 5=Non-ethnic, non-sectarian party, 6=Christian religious charity, 7=Shi'a religious charity, 8=Sunni religious charity, 9=Armenian organization, 10=Non-affiliated NGO, 11=Private for profit, 12=International, 13=Public, 14=Unknown, 15=Zaim/feudal leader.

v_pfrac

Measures the degree of ethnoreligious fractionalization of the population at the zone level based on voter registration records. For more information see the information for the frac variable in this codebook.

v_palawi

Percentage of the Alawite community at the zone level. Data source: voter registration records.

v_parmc

Percentage of the Armenian Catholic community at the zone level. Data source: voter registration records.

v_parmo

Percentage of the Armenian Orthodox community at the zone level. Data source: voter registration records.

v_parm

Percentage of the Armenian community at the zone level. Data source: voter registration records.

v_pcath

Percentage of the Catholic community at the zone level. Data source: voter registration records.

v_pchrist

Percentage of the Christian community at the zone level. Data source: voter registration records.

v_pminor

Percentage of the Christian minority communities at the zone level. Data source: voter registration records.

v_pdruze

Percentage of the Druze community at the zone level. Data source: voter registration records.

v_pgorth

Percentage of the Greek Orthodox community at the zone level. Data source: voter registration records.

v_pmaron

Percentage of the Maronite community at the zone level. Data source: voter registration records.

v_pprot

Percentage of the Protestant community at the zone level. Data source: voter registration records.

v_pshia

Percentage of the Shia community at the zone level. Data source: voter registration records.

v_psunni

Percentage of the Sunni community at the zone level. Data source: voter registration records.

high_ses

Derived from the 2007–2008 household surveys conducted by Statistics Lebanon. The data group households into four socioeconomic categories: low-income (A), lower-middle income (B), upper-middle income (C), and upper income (D). The categories are based on the self-reported, combined household income and ownership of a range of appliances and amenities such as mobile phones, cars, and refrigerators. This variable shows the percentage of households in the upper income group in the zone in which the institution is located. Data are limited to Beirut and Mount Lebanon provinces.

upper_middle_ses

Derived from the 2007–2008 household surveys conducted by Statistics Lebanon. The data group households into four socioeconomic categories: low-income (A), lower-middle income (B), upper-middle income (C), and upper income (D). The categories are based on the self-reported, combined household income and ownership of a range of appliances and amenities such as mobile phones, cars, and refrigerators. This variable shows the percentage of households in the upper-middle income group in the zone in which the institution is located.

lower_middle_ses

Derived from the 2007–2008 household surveys conducted by Statistics Lebanon. The data group households into four socioeconomic categories: low-income (A), lower-middle income (B), upper-middle income (C), and upper income (D). The categories are based on the self-reported, combined household income and ownership of a range of appliances and amenities such as mobile phones, cars, and refrigerators. This variable shows the percentage of households in the lower-middle income group in the zone in which the institution is located. Data are limited to Beirut and Mount Lebanon provinces.

low_ses

Derived from the 2007–2008 household surveys conducted by Statistics Lebanon. The data group households into four socioeconomic categories: low-income (A), lower-middle income (B), upper-middle income (C), and upper income (D). The categories are based on the self-reported, combined household income and ownership of a range of appliances and amenities such as mobile phones, cars, and refrigerators. This variable shows the percentage of households in the lower income group in the zone in which the institution is located. Data are limited to Beirut and Mount Lebanon provinces.

inst_id

Unique ID number for the institution.
